

ACO. creating

the future of drainage

## PORTFOLIO

### Six Flags Worlds of Adventure Cleveland, OH

The Six Flags Amusement Parks are one of the leading American theme parks. Six Flags at Aurora near Cleveland, includes the old Seaworld Marine Park. Constant improvements to the park have seen numerous uses of ACO Drain throughout pedestrian areas.

#### Project Design Brief

To fix the hardstand areas in front of the ‘Shark experience’ attraction, the drain is installed between brick pavers on one side and a cement concrete screed with gravel embedded on the other. The galvanized steel edge of the channel makes it ideal to butt the pavers against on one side, and the concrete slab with embedded gravel is finished against the rail on the other. The locked perforated grate is completely ADA and pedestrian safe.

#### Benefits

- The ADA compliant galvanized steel perforated grates would withstand a high volume of pedestrian traffic and any carts moving equipment around the park.
