				the layer. Continue until 24 inches of total fill thickness	Low Ground Pressure Tracked Vehicles (NOTE 4)	20,000
				has been placed above the tank. For AASHTO M145 soils,	Roller - Static Mode	12,000
FINAL FILL	Suitable Fill Materials as noted in the	See Project Geotech	inical Report and Site	a minimum of 95% of the Standard Proctor Maximum Dry	Roller - Vibratory Mode	12,000
Fill starting from the top of the	Project Geotechnical Report and noted	-	ineer's Plans	Density is recommended.	Dump Trucks and Pans	NOTE 5
embedment fill layer. (NOTE 1 and 2)	on the Site Design Engineer's Plans			After 24 inches of fill is placed, place fill in accordance with the engineer of record's relative compaction requirement or to 95% of the Standard Proctor Maximum Dry Density - whichever is greater.	NOTE 1: Vehicles shall make straight runs only across tank footprint. NOTE 2: Maximum ground pressure = 5 psi NOTE 3: Maximum axle load = 5,250 lbs NOTE 4: Maximum ground pressure = 7 psi NOTE 4: Maximum ground pressure = 7 psi NOTE 5: Contact ACO for more information regarding dump truck and pan traffic during construction. NOTE 6: Backfill material may be temporarily unloaded near the excavation. Material shall not be stockp longer than 24 hours.

REV.

1

NOTE 2: If open-graded aggregates are used for embedment fill, fines migration from the final to embedment fill layer may be reduced by installing a layer of 6 oz non-woven geotextile fabric at the final and embedment fill interface. NOTE 3: See Construction Equipment Table for more information for construction equipment limitations.

FILL CHART

NOTE 4: Import or native soils may be used if the soils meet the material classification listed. Fill material should be selected based on classification, groundwater conditions, and tank invert elevation

ed near the excavation. Material shall not be stockpiled near the excavation for

-Cut Geotextile and wrap around inlet/outlet pipe

-6 oz Non-Woven Geotextile (outer) around entire tank by Others

COVER CHART

Live Londing Condition	Cover Thickness (inches)		
Live Loading Condition	Minimum	Maximum	
Non-Trafficked Areas (i.e.	12	78	
Landscaping)	12		
Passenger Vehicles Parking Lot			
(i.e. Gross Vehicle Weight	18	78	
<10,000 lbs)			
Passenger Vehicle Parking Lot			
with one weekly AASHTO HS-20	24	78	
vehicle			
Frequent AASHTO HS-20 Traffic	26	78	

NOTE 1: Minimum Cover Thickness in non-trafficked areas is based on landscape surface with a 40 degree load distribution. In trafficked areas, Minimum Cover Thicknesses are based on an asphalt-surfaced pavement with a 30 degree load distribution. NOTE 2: Calculations assume backfill with a minimum 32-degree angle of internal friction and a maximum density of 120 lbs per cubic foot, and a seasonal groundwater elevation at least 2 feet below the invert of the tank

SIDE PANEL PIPE **DIAMETER CHART**

Inlet/Outlet Pipe Diameter				
Minimum	Maximum			
4 inches	6 inches			

NOTE 1: Cut inlet / outlet pipe hole prior to side panel installation. NOTE 2: Contact ACO for guidance for inlet / outlet pipes larger than 6-inch diameter
